

The diagram shows a central interface between two regions. On the left is a yellow octagon, and on the right is a white pentagon. The background is composed of light gray and dark gray polygonal shapes. Inside the yellow octagon, the text 'fe1' is enclosed in a faint gray oval. A horizontal line connects 'fe1' to the text '*sf1*', which is also enclosed in a faint gray oval. The label e_i is positioned at the interface between the two shapes. To the right of e_i is the text '*sf2*', enclosed in a faint gray oval, which is connected by a horizontal line to the text 'fe2' inside the white pentagon. The text 'fe2' is also enclosed in a faint gray oval.
